NEWS RELEASE

ABELLIO BUS ADOPTS ENVIROX™

After conducting a thorough trial in its 4 largest depots, Abellio has decided to adopt Energenics' fuel saving additive Envirox™. The trial, which monitored the changes in MPG of over 280 buses for a 12 month period, concluded that worthwhile fuel savings had been achieved. Envirox™ will now be used on an ongoing basis and rolled out to all of Abellio's bus depots.

Energenics is delighted that Abellio has chosen to use its high technology fuel additive as part of their campaign to improve fuel efficiency. The effectiveness of Envirox in reducing soot blockage in buses fitted with Diesel Particulate Filters (DPFs) makes it a particularly attractive proposition to improve fuel economy and to reduce emissions.

For further information, please contact:

NOTES TO EDITORS

Energenics Europe became the owner of the Envirox™ business in Sept 2009. It was originally part of the technology company Oxonica plc which was spun out from Oxford University research into advanced materials. Energenics is focussed upon the continuing commercialisation of Envirox™ and researching novel nanomaterials for a number of other applications. We are an active member of the scientific community on Oxford University's Begbroke Science Park.

Envirox™ is based on a common oxidation catalyst - cerium oxide - which is widely used in catalytic converters. The material has been re-engineered using nanotechnology to allow it to be delivered as a diesel fuel treatment. This ensures a cleaner burn within the combustion chamber, resulting in improved fuel efficiency and lower emissions. It also facilitates the removal of carbon deposits from engines and diesel particulate filters (DPFs). Energenics estimate that sales to date of Envirox™ as DPF fuel treatments have been enough to regenerate over 500,000 soot filters.
